

Final project proposal

Math 106

Due Monday, November 6 by 11:59pm

Instructions. Choose a final project (see course website for more information and project suggestions) and a final project partner (groups of 2 – anything different needs approval). I would like you to submit the following information:

- (i) Project title
- (ii) One paragraph about the focus and scope of your project. (Don't be overly ambitious. The presentation is only 15 minutes! You should pick a single question/problem/theorem to focus on.)
- (iii) A list of at least two references (not Wikipedia, do Carmo is okay)

Submit this as a group on Gradescope. One submission per group!
