

# Final project proposal

Math 1030

Due Tuesday, March 31 by 5pm

*Instructions.* Choose a final project (see course website for more information and project suggestions) and a final project partner (groups of 2 – anything different needs approval). I would like you to submit the following information:

- (i) Project title
- (ii) One paragraph about the focus and scope of your project. Don't be overly ambitious. The presentations are around 20 minutes. You should pick a single question/problem/theorem to focus on. I do not want a survey of a big topic. Pick something specific within the big topic.
- (iii) A list of at least two references (not Wikipedia, West is okay)

Submit this as a group on Gradescope. One submission per group.
